Digital epigraphy and social media for master students: the example of Linear B tablets

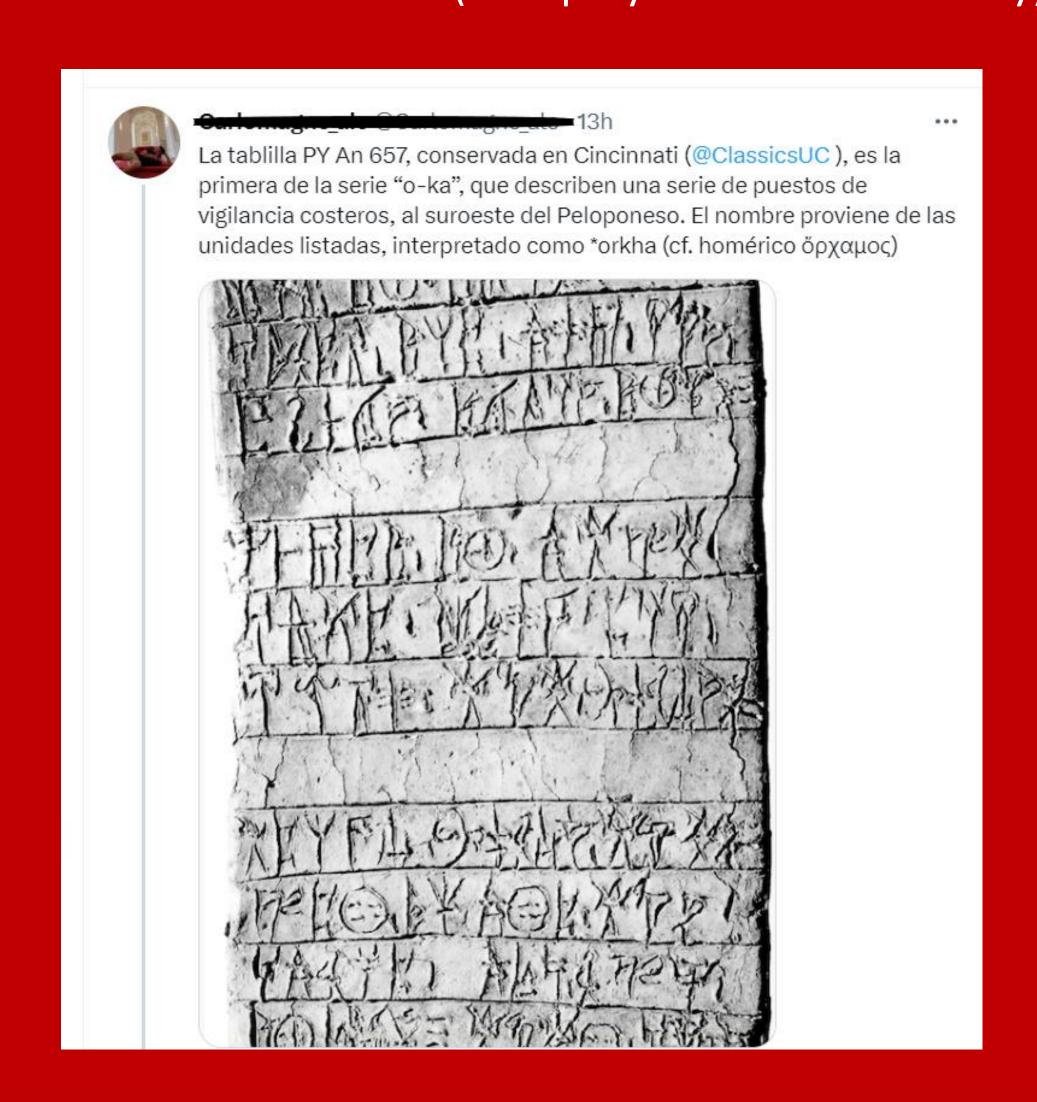

SUBJECT	Aegean world in the Bronze Age: Minoans and
	Mycenaeans
LEVEL	Master of Ancient History and sciences of the
	Antiquity
NUMBER OF STUDENTS	8
PREVIOUS LEVEL OF	High
SOCIALNETWORKS	
PREVIOUS LEVEL OF DIGITAL	Low
EPIGRAPHY DATABASES	

Training during lessons

- 1. Master class about epigraphic databases, basic search
- 2. Master class about DAMOS database and NESTOR database (for bibliography)
- 3. Master class about creating Twitter files: public, appropriate language, hashtags, visual information, and academic probity

Students task: a Twitter file

Students must study one Tablet in lineal B using the NESTOR database for bibliography and the DAMOS database. They choose a perspective (Gender, work, rituality, uses of color) of their Tablet. Instead of writing a report, they present their results in a Twitter file related to our official account (Antiquity from the University).

Why Twitter?

 There are many social networks that students use and know: Facebook, Twitter, Instagram, and TikTok. Nevertheless, I have chosen Twitter for several reasons:

In this academic year 2022-2023, I am developing a digital

epigraphy Project with social networks for master students.

Students had a low level of knowledge about digital

epigraphy databases. The most important one in Greek

Bronze Age is the DAMOS database. My main objectives

Offer them significant knowledge Provide them with skills

Promote Public History as a way to spread digital

they will use in the future Spread digital epigraphic

epigraphy databases + encourage students to publicize

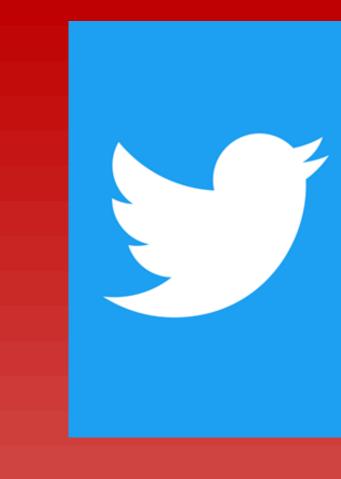

Objectives

are;

- Twitter is an open social network. There is no need for friendship acceptance. It is possible to follow everyone
- Public History is strong in Twitter (scholars such as Mary Beard have opened this path)
- Write less and say more: Twitter restrictions avoid long speech. It is also an exercise!
- File format with visual resources permits the creation of an organized presentation.
- They can cite museums and institutions and spread their files.
- Twitter is polemic, people discuss. Students experience the real world

Edit profile

Results

Students are more motivated to go out of their comfort zone. They are not familiar with epigraphic databases. In contrast, they know well how to use social networks. Using a combination of both permits me to pressure them to acquire new skills. Our account is receiving more retweets due to proper citations to institutions. Students are in the process of replying to comments and experiencing Twitter replies. I will repeat the project in future courses.
